

Perfecto AI QuickStart

Perfecto AI QuickStart is a guided onboarding and implementation package that helps teams adopt Perfecto AI quickly and effectively. While AI-driven test creation is intuitive, moving from scripted automation to natural language prompting requires new skills and clear operating practices. This engagement provides the training, coaching, and hands-on support needed to help your team build reliable AI-driven tests faster, reduce adoption risk, and establish a strong foundation for scale.

Key Benefits

Accelerate Test Creation/ Delivery: Reduce QA cycle times with faster authoring in natural language, helping teams move from idea to execution with greater speed.

Advance Execution at Scale: Use Quantum integration to support parallel execution, multi-driver scenarios, and interoperability with external tools and libraries.

Minimize Script Maintenance: Replace brittle, high-maintenance scripts with AI-driven automation that adapts more effectively to application changes.

Simplify Localization Testing: Validate application behavior across languages by writing prompts in English, reducing the complexity of traditional localization automation.

Align Business Intent With Test Execution: Create tests in plain language so automated coverage maps more directly to business requirements.

Improve Production Readiness: Learn prompt engineering best practices, expected system behaviors, and escalation paths to support stable enterprise adoption.

Expand Reuse Across Platforms: Author once and execute across mobile and web environments to increase coverage without duplicating effort.

Prepare for Future Innovation: Establish foundational AI testing practices that position your team to take advantage of upcoming Perfecto AI capabilities.

Core Components

- 1. Perfecto Platform Fundamentals:** Build a strong foundation in the core Perfecto platform, including manual and automated testing workflows, reporting, asset **management, test environments, and visual capabilities.**
- 2. Perfecto Scriptless AI and AI Assistant:** Learn how to use Perfecto Scriptless and the Perfecto AI Assistant to create automated tests in natural language for web and mobile use cases.
- 3. MCP Integration:** Learn how Perfecto MCP lets AI agents execute, monitor, and analyze tests through natural-language commands, right within your IDE.
- 4. Prompting Best Practices and Knowledge Validation:** Develop effective prompting techniques, understand system guardrails and limitations, and reinforce learning through interactive knowledge checks.
- 5. Structured AI Troubleshooting Model:** Apply a practical framework to identify prompt-quality issues, refine AI interpretation, and distinguish when escalation to product support is required.
- 6. Production Readiness and AI Roadmap Alignment:** Set clear expectations for scaling from proof of concept to production, while preparing your team for next-generation AI capabilities and agentic testing workflows.
- 7. Instructor-Led, Hands-On Enablement:** Work directly with a Perfecto expert to apply AI-driven testing practices in your environment, including teams using Appium, Selenium, Quantum, or Perfecto Scriptless.
- 8. Practical Assignments and Certification:** Complete hands-on assignments using your own application and deliver a fully AI-automated test case. Participants who complete the program earn an official Perfecto AI Certification.

Get Started

Perfecto AI QuickStart helps your team adopt AI-driven test automation with greater speed, consistency, and confidence. Contact us to learn how to accelerate onboarding, build production-ready practices, and maximize the value of your **Perfecto AI** investment.
